Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Othello.models.players.corner_player.CornerPlayer	3
Othello.models.players.manhattan_corner_player.ManhattanCornerPlayer	3
Othello.models.players.mixed_heuristic_player.Minimax1111Player	4
Othello.models.players.minimize_moves_player.Minimax111Player	6
Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player	7
Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player	8
Othello.models.players.random_player.RandomPlayer	10

Chapter 2

Class Documentation

2.1 Othello.models.players.corner_player.CornerPlayer Class Reference

Public Member Functions

- def **__init__** (self, color)
- def **play** (self, board)
- def **getNearestCorner** (self, moves)

Public Attributes

- **color**

The documentation for this class was generated from the following file:

- corner_player.py

2.2 Othello.models.players.manhattan_corner_player.ManhattanCornerPlayer Class Reference

Public Member Functions

- def **__init__** (self, color)
- def **play** (self, board)
- def **getNearestCorner** (self, moves)

Public Attributes

- **color**

The documentation for this class was generated from the following file:

- manhattan_corner_player.py

2.3 Othello.models.players.mixed_heuristic_player.Minimax1111Player Class Reference

Public Member Functions

- `def __init__ (self, color)`
- `def play (self, board)`
- `def board_value_table (self, board, player_color)`
- `def board_value_pieces (self, board, player_color)`
- `def board_value_minimize (self, board, player_color)`
- `def max_move (self, board, player_color, depth, alpha, beta)`
- `def min_move (self, board, player_color, depth, alpha, beta)`
- `def minimax (self, board, player_color)`
- `def heuristic (self, move)`
- `def gameover (self, board)`

Public Attributes

- **color**
- **max_depth**
- **heuristic_type**

2.3.1 Detailed Description

Documentation for the minimax with alpha-beta pruning AI player.

This class is the implementation of the minimax algorithm with alpha-beta pruning for improved speed and greater depth search.
This class uses heuristic 4 (mixed).

2.3.2 Constructor & Destructor Documentation

2.3.2.1 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.__init__(self, color)`

Constructor.

2.3.3 Member Function Documentation

2.3.3.1 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.board_value_minimize (self, board, player_color)`

This function returns the value of the board received as argument.
It is the number of valid moves for the opponent.

2.3.3.2 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.board_value_pieces (self, board, player_color)`

This function returns the value of the board received as argument.
It is the sum of all positions owned by that player_color minus the sum of positions owned by the opposition. Blank positions do not count.

2.3.3.3 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.board_value_table (self, board, player_color)`

This function returns the value of the board received as argument.
It is the sum of all positions that player_color has minus the sum of positions that the opposition has. Blank positions do not count.

2.3.3.4 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.gameover (self, board)`

This function returns +1 if white player wins, -1 if black player wins,
0 if game is not over and +2 if game is a tie

2.3.3.5 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.heuristic (self, move)`

This function returns the value of the move, according to the heuristic table below:

```
100,  0,  6,  5,  5,  6,  0, 100
  0,  0,  8,  3,  3,  8,  0,   0
  3,  7,  3,  2,  2,  3,  7,   3
  4,  3,  2,  1,  1,  2,  3,   4
  4,  3,  2,  1,  1,  2,  3,   4
  3,  7,  3,  2,  2,  3,  7,   3
  0,  0,  8,  3,  3,  8,  0,   0
100,  0,  6,  5,  5,  6,  0, 100
```

2.3.3.6 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.max_move (self, board, player_color, depth, alpha, beta)`

This is the max part of the alpha-beta pruning. It plays every valid move available for player_color (this player) until the game is over, if a move ends the game or the depth is reached. It calls the min part of the alpha-beta algorithm. During the recursive part, the return value (integer) of this function is the current best value. If depth is 0, meaning the end of the recursive part, it returns the best move (Move object)

2.3.3.7 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.min_move (self, board, player_color, depth, alpha, beta)`

This is the min part of the alpha-beta pruning. It plays every valid move available for player_color (opponent) until the game is over, if a move ends the game or the depth is reached. It calls the max part of the alpha-beta algorithm. Return value (integer) of this function is the current best value (beta). Very similar with the max function.

2.3.3.8 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.minimax (self, board, player_color)`

Wrapper function to call max and get the best move.

2.3.3.9 `def Othello.models.players.mixed_heuristic_player.Minimax1111Player.play (self, board)`

This is the function called by the board controller. Returns a Move.

The documentation for this class was generated from the following file:

- mixed_heuristic_player.py

2.4 Othello.models.players.minimize_moves_player.Minimax111Player Class Reference

Public Member Functions

- `def __init__ (self, color)`
- `def play (self, board)`
- `def board_value (self, board, player_color)`
- `def max_move (self, board, player_color, depth, alpha, beta)`
- `def min_move (self, board, player_color, depth, alpha, beta)`
- `def minimax (self, board, player_color)`
- `def gameover (self, board)`

Public Attributes

- `color`
- `max_depth`

2.4.1 Detailed Description

Documentation for the minimax with alpha-beta pruning AI player.

This class is the implementation of the minimax algorithm with alpha-beta pruning for improved speed and greater depth search.
This class uses heuristic 3 (minimize).

2.4.2 Constructor & Destructor Documentation

2.4.2.1 `def Othello.models.players.minimize_moves_player.Minimax111Player.__init__ (self, color)`

Constructor.

2.4.3 Member Function Documentation

2.4.3.1 `def Othello.models.players.minimize_moves_player.Minimax111Player.board_value (self, board, player_color)`

This function returns the value of the board received as argument.
It is the number of valid moves for the opponent.

2.4.3.2 `def Othello.models.players.minimize_moves_player.Minimax111Player.gameover (self, board)`

This function returns +1 if white player wins, -1 if black player wins,
0 if game is not over and +2 if game is a tie

2.4.3.3 `def Othello.models.players.minimize_moves_player.Minimax111Player.max_move (self, board, player_color, depth, alpha, beta)`

This is the max part of the alpha-beta pruning. It plays every valid move available for player_color (this player) until the game is over, if a move ends the game or the depth is reached. It calls the min part of the alpha-beta algorithm. During the recursive part, the return value (integer) of this function is the current best value. If depth is 0, meaning the end of the recursive part, it returns the best move (Move object)

2.4.3.4 `def Othello.models.players.minimize_moves_player.Minimax11Player.min_move(self, board, player_color, depth, alpha, beta)`

This is the min part of the alpha-beta pruning. It plays every valid move available for player_color (opponent) until the game is over, if a move ends the game or the depth is reached. It calls the max part of the alpha-beta algorithm. Return value (integer) of this function is the current best value (beta). Very similar with the max function.

2.4.3.5 `def Othello.models.players.minimize_moves_player.Minimax11Player.minimax(self, board, player_color)`

Wrapper function to call max and get the best move.

2.4.3.6 `def Othello.models.players.minimize_moves_player.Minimax11Player.play(self, board)`

This is the function called by the board controller. Returns a Move.

The documentation for this class was generated from the following file:

- minimize_moves_player.py

2.5 Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player Class Reference

Public Member Functions

- `def __init__(self, color)`
- `def play(self, board)`
- `def board_value(self, board, player_color)`
- `def max_move(self, board, player_color, depth, alpha, beta)`
- `def min_move(self, board, player_color, depth, alpha, beta)`
- `def minimax(self, board, player_color)`
- `def gameover(self, board)`

Public Attributes

- `color`
- `max_depth`

2.5.1 Detailed Description

Documentation for the minimax with alpha-beta pruning AI player.

This class is the implementation of the minimax algorithm with alpha-beta pruning for improved speed and greater depth search. This class uses heuristic 2 (pieces).

2.5.2 Constructor & Destructor Documentation

2.5.2.1 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.__init__(self, color)`

Constructor.

2.5.3 Member Function Documentation

2.5.3.1 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.board_value (self, board, player_color)`

This function returns the value of the board received as argument.
It is the sum of all positions owned by that `player_color` minus the sum of positions owned by the opposition. Blank positions do not count.

2.5.3.2 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.gameover (self, board)`

This function returns +1 if white player wins, -1 if black player wins,
0 if game is not over and +2 if game is a tie

2.5.3.3 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.max_move (self, board, player_color, depth, alpha, beta)`

This is the max part of the alpha-beta pruning. It plays every valid move available for `player_color` (this player) until the game is over, if a move ends the game or the depth is reached. It calls the min part of the alpha-beta algorithm. During the recursive part, the return value (integer) of this function is the current best value. If depth is 0, meaning the end of the recursive part, it returns the best move (Move object)

2.5.3.4 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.min_move (self, board, player_color, depth, alpha, beta)`

This is the min part of the alpha-beta pruning. It plays every valid move available for `player_color` (opponent) until the game is over, if a move ends the game or the depth is reached. It calls the max part of the alpha-beta algorithm. Return value (integer) of this function is the current best value (beta). Very similar with the max function.

2.5.3.5 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.minimax (self, board, player_color)`

Wrapper function to call max and get the best move.

2.5.3.6 `def Othello.models.players.pieces_quantity_alpha_beta_player.Minimax11Player.play (self, board)`

This is the function called by the board controller. Returns a Move.

The documentation for this class was generated from the following file:

- `pieces_quantity_alpha_beta_player.py`

2.6 Othello.models.players.table_minimax_alpha_beta_player.Minimax11Player Class Reference

Public Member Functions

- `def __init__ (self, color)`
- `def play (self, board)`

- def `board_value` (self, board, player_color)
- def `max_move` (self, board, player_color, depth, alpha, beta)
- def `min_move` (self, board, player_color, depth, alpha, beta)
- def `minimax` (self, board, player_color)
- def `heuristic` (self, move)
- def `gameover` (self, board)

Public Attributes

- `color`
- `max_depth`

2.6.1 Detailed Description

Documentation for the minimax with alpha-beta pruning AI player.

This class is the implementation of the minimax algorithm with alpha-beta pruning for improved speed and greater depth search.
This class uses heuristic 1 (table).

2.6.2 Constructor & Destructor Documentation

2.6.2.1 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.__init__(self, color)`

Constructor.

2.6.3 Member Function Documentation

2.6.3.1 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.board_value(self, board, player_color)`

This function returns the value of the board received as argument.
It is the sum of all positions that `player_color` has minus the sum of positions that the opposition has. Blank positions do not count.

2.6.3.2 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.gameover(self, board)`

This function returns +1 if white player wins, -1 if black player wins,
0 if game is not over and +2 if game is a tie

2.6.3.3 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.heuristic(self, move)`

This function returns the value of the move, according to the heuristic table below:

```
100,  0,  6,  5,  5,  6,  0, 100
  0,  0,  8,  3,  3,  8,  0,  0
  3,  7,  3,  2,  2,  3,  7,  3
  4,  3,  2,  1,  1,  2,  3,  4
  4,  3,  2,  1,  1,  2,  3,  4
  3,  7,  3,  2,  2,  3,  7,  3
  0,  0,  8,  3,  3,  8,  0,  0
100,  0,  6,  5,  5,  6,  0, 100
```

2.6.3.4 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.max_move (self, board, player_color, depth, alpha, beta)`

This is the max part of the alpha-beta pruning. It plays every valid move available for player_color (this player) until the game is over, if a move ends the game or the depth is reached. It calls the min part of the alpha-beta algorithm. During the recursive part, the return value (integer) of this function is the current best value. If depth is 0, meaning the end of the recursive part, it returns the best move (Move object)

2.6.3.5 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.min_move (self, board, player_color, depth, alpha, beta)`

This is the min part of the alpha-beta pruning. It plays every valid move available for player_color (opponent) until the game is over, if a move ends the game or the depth is reached. It calls the max part of the alpha-beta algorithm. Return value (integer) of this function is the current best value (beta). Very similar with the max function.

2.6.3.6 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.minimax (self, board, player_color)`

Wrapper function to call max and get the best move.

2.6.3.7 `def Othello.models.players.table_minimax_alpha_beta_player.Minimax1Player.play (self, board)`

This is the function called by the board controller. Returns a Move.

The documentation for this class was generated from the following file:

- `table_minimax_alpha_beta_player.py`

2.7 Othello.models.players.random_player.RandomPlayer Class Reference

Public Member Functions

- `def __init__ (self, color)`
- `def play (self, board)`

Public Attributes

- `color`

The documentation for this class was generated from the following file:

- `random_player.py`
